Background

The "NIH salary cap," as it is commonly referred to, is a statutory limitation imposed by Congress on an individual’s rate of pay directly chargeable to grants, cooperative agreements, and contracts issued by the National Institutes of Health (NIH). The salary cap limits the rate of pay chargeable to NIH awards to a maximum tied to the Federal Executive Pay Scale and the year of the award. The capped rates of pay apply equally to academic year and fiscal year employees.

For salary cap summary FY 1990 - present, visit https://grants.nih.gov/grants/policy/salcap_summary.htm

Based on Notice Number, NOT-OD-20-068, the Department of Health and Human Services (HHS), including NIH, operates under The Department of Defense and Labor, Health and Human Services, and Education Appropriations Act, 2020 (Public Law 116-94), signed into law on December 20, 2019. Please see the NIH website (http://www.nih.gov/) for the most accurate information. In accordance with an Executive Order, the pay scale for Executive Level II was increased from $192,300 to $197,300 effective January 5, 2020.

Salary Cap and Compliance

Compliance with the salary cap requires comparing a University employee's rate of pay with the maximum rate of pay established by Congress for the NIH award. An employee’s rate of pay is defined as the salary in dollars, payable to the employee per unit of time worked at 1.0 Full Time Equivalent (FTE) effort. For example, a fiscal year employee who is paid $120,000 per year for full time work has a monthly rate of pay of $10,000 per full time month worked. A fiscal year employee who is paid $60,000 per half time work also has a rate of pay of $10,000 per full time month worked. An academic year employee who is paid $120,000 for full time effort during the academic year has a rate of pay of $13,333.33 per full time month worked, because the annual salary is divided by nine months of effort, not twelve. The rate of pay is unaffected by whether the employee receives pay in nine or twelve monthly pay checks. The timing of paychecks does not determine the rate of pay for salary cap purposes. The NIH salary cap only affects employees whose rate of pay is above the defined rates, and who charge some or all of their salary to awards and/or sub-awards from NIH. The NIH salary cap has no effect on employees whose rate of pay is less than the defined rates, or whose salary is not charged to sponsored projects originating from NIH.

Types of Pay to Determine the NIH Rate of Pay

APO: sk
Not all pay is included in determining whether an employee’s rate of pay exceeds the cap. Only categories of pay charged to sponsored projects are counted in an employee’s rate of pay for comparison with the salary cap. Administrative stipends, honoraria, outside consulting fees and supplemental compensation for incidental services to University Extension are not included in the rate of pay determination. These types of pay should not be charged to NIH. For employees covered by a Health Sciences Compensation Plan (HSCP), both the UC Health Sciences Salary Scale base salary, or “X” component of salary, and the negotiated additional compensation, or “Y” component of salary, are included in determining the employee’s rate of pay. If the combined rate of pay (including both X and Y) exceeds the capped rate, the maximum amount chargeable to the NIH award is the capped rate multiplied by the employee’s effort on each award. However, any incentive/bonus compensation under a Health Sciences Compensation Plan, also known as the “Z” component, is not included in the employee’s rate of pay, and is not an allowable charge to the NIH award.

Fund Sources for Supplementation Above the Salary Cap
Salary “supplementation” is the difference between what the employee would have earned at full pay and the maximum amount allowed under the cap for that percent of effort. Or simply put, it is the excess amount of the employee’s rate of pay over and above the salary cap rate. This excess amount over the salary cap may not be charged to another federal award. It may, however, be charged to a privately sponsored award only when specifically allowed by the private sponsor. Additionally, University policy prohibits the use of State appropriations, including 19900 funds, to pay the salary above the capped level. Unrestricted funds, including gift funds and HSCP funds, can be used to make up amounts not chargeable to NIH due to the salary cap.

Supplementation is subject to the availability of funds and is not an entitlement. Supplementation above the capped rate must be pre-authorized by the department chair or equivalent administrative officer.

Post Audit for Compliance
The Academic Personnel Office will annually announce the updated NIH Salary Cap rate on the Academic Personnel web site [https://academicpersonnel.ucr.edu/compensation/](https://academicpersonnel.ucr.edu/compensation/) during the winter quarter or spring quarter (based on when the information from the NIH is available). Department Financial Managers are responsible for ensuring appropriate salary rates are entered in UCPath. It is important for departments to understand the appropriate use of each chart below. For questions related to rates of pay, send an email to academicpersonnel@ucr.edu. Each Dean’s Office will be responsible for ensuring compliance with the NIH Salary Cap for employees in their organization by conducting periodic reviews of compensation rates charged to NIH funding sources. These reviews should occur quarterly and errors must be resolved promptly. All errors must be corrected by fiscal year-end. Any salary rate above the maximum capped rate charged to a non-allowable fund source (i.e., state or federal funds) must be reversed. The department chair or equivalent administrative officer is responsible to provide funding for the excess amount from a non-state or non-federal funding source, or repayment of any overpayment shall be required from the employee.

Academic Year Employees
Most academic year employees receive their academic year salary over twelve monthly pay periods for service rendered over a nine-month period.

**Example 1 – Monthly salary above salary cap**
Professor Jones has a full-time academic year appointment and an academic year salary of $150,000 in the 2019-2020 academic year. Professor Jones receives payment for nine months of service over twelve months (9/12), and receives twelve monthly paychecks of $12,500. The Professor received an NIH grant in July 2019 and was paid from
that grant. From 07/01/19 through 01/04/20, the NIH salary cap for grants awarded for the same period was $12,018.75.

Consequently, the excess salary of $481.25 per month ($12,500 - $12,018.75) of Professor Jones’ compensation may not be charged to the NIH award. If Professor Jones received a merit increase or an off-scale salary adjustment effective 07/01/19, the NIH grant could be charged up to $12,018.75 per month, but not more than that amount until a new salary cap figure is available.

**Example 2 – Monthly salary below salary cap**
Professor Smith has a full-time academic year appointment and an academic year salary of $120,000 in the 2019-2020 academic year. Professor Smith receives payment for nine months of service over twelve months (9/12), and receives twelve monthly paychecks of $10,000. The Professor received an NIH grant in July 2019 and was paid from that grant. From 07/01/19 through 01/04/20, the NIH salary cap for grants awarded for the same period was $12,018.75. The entire $10,000 monthly salary for Professor Smith may be charged to the NIH grant between 07/01/19 through 01/04/20. If Professor Smith received a merit increase or an off-scale salary adjustment effective 07/01/19 the NIH grant could be charged up to $12,018.75 per month, but not more than that amount until a new salary cap figure is available.
